Email Address:

Pool Lift Model No./Ref.

State whether the pool is deck-level or standard tank (dropped level), and whether pool is indoor or outdoor.

If pool or spa is above-ground, confirm what height the walls stand above the pool surround – also the width and thickness of the surrounding concrete base.

Sketch required showing the profile of poolside and pool edge with all dimensions including:

- | | |
|---------------|--|
| Standard Tank | - Details of gulley/gutter, edging tiles, also any teaching rail |
| | - Height of pool deck above water level |
| | - Slope on poolside from approx 600mm (24") to pool edge |
| Deck-level | - Pool edge detail including edging or bullnose tiles |
| | - Grille details and dimensions, and distance from pool edge |
| | - Slope on poolside from approx 600mm (24") to pool edge |

Confirm the pool surround details including overall thickness of screed and tiles, recommended 20-25mm (¾" – 1") maximum for standard poolside sockets. Special deep fixing sockets are available in case of need.
