SPECTRUM AQUATICS®

Elkhorn – Assisted Access Lift

The Industries' Strongest Economical Lift

Spectrum Aquatics® is the industry leader in the design and manufacture of swimming pool and spa assisted access lifting devices. Innovative product designs, coupled with advanced manufacturing methods, attribute to our sterling product safety history. Years of experience and thousands of satisfied users attest to the superiority of the products we offer.

The Elkhorn assisted access lift affords the cost conscious user the ability to own the strongest economical lift available in the market place today. These claims are supported by certified load and seismic calculations. Don't take chances - insist on receiving certified documentation supporting load limits and Seismic Zone 4 installation capability.

The Elkhorn is easy to install in new or existing aquatic facilities. If necessary, one Elkhorn lift may be utilized to accommodate patrons on multiple bodies of water - install multiple anchors at desired locations and then simply move the lift to the desired location. The lift may be removed from one anchor and installed in another in a matter of minutes.

Elkhorn lifts are very easy to operate. A single lever hydraulic ram raises and lowers the occupant into and out of the water. The unit, fully loaded, is easy to rotate, even if the operator is small in stature. Ease of rotation is due to Elkhorn's unique 2-3/8 inch sleeved stainless steel anchoring system; the unit is nearly frictionless.

Elkhorn Features:

- The Elkhorn is fabricated from 304 stainless steel and incorporates Spectrum's exclusive dual passivation process ensuring maximum corrosion resistance.
- The load capacity of the Elkhorn is 400 pounds, with a safety factor of 1.5.
- Certified calculations supporting load capacity and Seismic Zone 4 installation capability are provided.
- The lifting mechanism is a hydraulic ram, i.e.; unit requires no electrical connection.
- The lift employs a quick-drying, adjustable mesh sling that is supported by a stainless steel chain and stainless steel overhead spreader bar.
- Elkhorn lifts are portable and lightweight - weighing less than 60 pounds.
- Easy to install, even into existing concrete decks.
- Units are designed for installation in the decks of in-ground and above-ground pools/spas that have wall heights of up to 31 inches.

- The lift accommodates a setback of 12 to 24 inches, allowing for installation on pools/spas with large gutters and/or copingstones.
- Lifts employ a 2-3/8 inch inside diameter, commercial grade, sleeved stainless steel anchor system.

An optional solid stainless steel adapter is available, which allows the Elkhorn to be installed into existing 1.90 inch, inside diameter, Spectrum sleeved anchors.

Mast, arm, hinge and attachments are constructed of stainless steel

Stainless steel overhead spreader bar

MIG weld and stainless hardware throughout.

Single lever hydraulic ram

Stainless steel adapter and deck anchor cover
